PH no-8628952423

Professional Summary

Motivated and detail-oriented [Computer Science] graduate with a strong foundation in [key skills, e.g., software development, data analysis]. Ability to deliver [high-quality projects, innovative solutions] through teamwork and problem-solving. Seeking to contribute to [industry/role, e.g., tech-driven organizations] with a passion for [specific interest, e.g., efficiency].

[Education]

- Bachelor of Technology in Computer Science and Engineering [Graduation Year, july [2026]
- Bahra University,solan
- GPA: [Your GPA : 7.5/10.0]

Projects

[E-Commerce Web Application]

[Date july 2024]

- Responsive Design: Uses Bootstrap for mobile-friendly layouts.
- Loading Animation: A spinner that appears while the page
- loads. Navigation Menu: Collapsible for smaller screens.
- Consistent Styling: Uniform fonts, colors, and layout.
- Social Media Links: Included in the header and team sections.
- Footer: Contains company information, about us, and contact
- details. Technologies: [HTML, CSS, JavaScript,]. Designed and
- implemented [specific project details : a full-stack web application

[Amazon Clone:]

[Date jan 2025]

- Clone: A responsive e-commerce website mimicking Amazon's layout with a navigation bar, product grid, and footer.
- Key Features: Search bar, account links, product categories, hero banner, and 8 product display boxes.
- Design: Clean UI with hover effects, Flexbox layout, and mobile-friendly media queries.
- Footer: Includes "Back to Top" company links, social media, and copyright info.
- Tech Stack: Pure HTML & CSS, no backend functionality (static prototype).

[Sales analyzing and visualizing]:

[Date july 2025]

This project focuses on analyzing and visualizing mobile phone sales data, leveraging Jupyter Notebook for data cleaning and preparation, and PowerBI for advanced visualization and dashboarding. Below is a step-by-step description of the project based on the provided Jupyter Notebook content and how it can integrate with PowerBI for a complete end-to-end workflow.

- **Project Overview**

The goal is to process a dataset (Sales.csv) containing mobile phone details (e.g., brands, models, colors, memory, storage, ratings, selling prices, discounts) to gain insights into sales trends, brand performance, and pricing strategies. The dataset has 3,114 entries initially, covering attributes like phone specifications and pricing.

- **Tools Used:**

- Jupyter Notebook: For interactive data exploration, cleaning, and scripting in Python. It's ideal for prototyping, as it allows mixing code, visualizations, and explanations in one document.
- PowerBI: For creating interactive dashboards and reports. It excels at data modeling, visualizations (e.g., charts, maps), and sharing insights with stakeholders.

This combination enables a seamless workflow: Prepare data in Jupyter, export it, and visualize in PowerBI.

[Analytics for BMW Vehicle Performance Optimization]

[Date aug 2025]

This project focused on leveraging machine learning techniques to analyze and predict BMW vehicle performance metrics, including fuel efficiency, engine wear, and failure rates. By processing real-world telemetry data from a fleet of 500+ BMW models (e.g., 3 Series, 5 Series, X5), the model identified key factors influencing degradation and proposed optimization strategies for predictive maintenance. The work was conducted in a Jupyter Notebook environment, resulting in an interactive dashboard for stakeholders.

- **Methodology**

- Data Acquisition & Preprocessing
- Exploratory Data Analysis (EDA)
- Model Development

- **Objectives**

- Data Exploration & Cleaning
- Predictive Modeling
- Visualization & Insights

Skills

- **Technical Skills:** [List skills, e.g., Python, Java, SQL, React, Power BI, Excel, AWS]
- **Soft Skills:** [List skills, e.g., Teamwork, Communication, Problem-Solving]
- **Certifications:** [java core, Front End Developer, Data Science Methodology]

Additional Information

- Languages: [e.g., English (Fluent), Hindi (Native)]
- Interests: [e.g., Open-source contributions, Competitive programming]
